## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to method of manufacturing a semiconductor device, classified in class 438, subclass 617.
- II. Claims 8-20, drawn to semiconductor device, classified in class 257, subclass 784.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device of group II invention could be made by as a different process. For example, heating the first and the second bonding material separately, instead of heating the first and the second bonding material simultaneously.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
